January solar power generation was 1,925,886kWh, 7% below the P50 forecast due to a large amount of rainfall and snowfall in Hokkaido and a small amount of productive daylight hours in Okinawa.¹

¹ Forecast Power Generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant’s operating plan.

² CO2 reduction is calculated as 0.66kg CO2 per kWh.
